

POLYMER COMPOSITE BASEMENT DOOR

ABSTRACT OF THE DISCLOSURE

Cellar or bulk head doors having sidewalls are provided which are made of
5 a polymer and which are strong, durable, attractive, virtually maintenance free,
easily assembled, have connection and anchorage points which allow the door
assembly to be used over a wide temperature range without damage to the polymer
parts making up the assembly and which has an opening preferably in one or both
10 of the sidewalls for inserts such as a window, louver, screen or blank and which
insert may be easily changed without tools for the purpose of providing light,
ventilation, or security. The doors also may be extended from the structure being
enclosed using opposed vertical extenders mated with a horizontal extender.
